

Fair Oaks Calif. Feby 17/61

Dear Mr. Harriner:

Yours of Feby 7th in which you ask who some of the other men in the pictures are x

In the big tube picture Mr Bradford is on the right of the tube - myself at end - others I do not recall x On other side of picture Bradford is right behind the stove x (He is the man who with myself recd an offer of \$300 gold a month to help establish wireless station along the Amazon) x

You guessed correctly - it was to become the tube between primary and secondary of the immense transmitter coil in the Jamalpa station.

In the 7th + Alameda station in La the fellow to the left of me on step is Mr Swenson (hus) who was our electrician and a fine fellow and good consciencious craftsman x Bradford is standing to my right x The other man was also with the crew and went to Jamalpa - Swenson did not x

I switched over to Continental during the two weeks at Tamalpais.

One thing I did not mention in my former letter. During that 3 day storm it seems to me that NPL did accept some messages over the phone for a few friends & sent them to NPK Pt Arguello. Before that, NPL was going to do some work there and Mr Hanscom asked me if I would handle their traffic (which was not heavy then) to NPK. I said I would. They phoned them to me and I sent them to NPK. Remember a party at NPL after that while Mr Hanscom was still there. I came home with an automobile dealer from San Diego. I think his name was Tibbets.

Yep those were the days of carborundum, silicon, cat whiskers etc and static was something that knocked your set laid.

So long. Mail me a copy of your publication when you get around to it.

"Ku"

PS The radio ops on "Harvard" and "Yale" used to come up on the Grant Hotel when in port. A. J. Krenke  
OK yes, who told you about a Fritz Krenke, and started all this ruckus?
