4742-V

Alice Mitchell SOWP 4742V Board Member. 18 Burnards Court, Berrycombe Road, Bodmin, Cornwall, Pl31 2NU.

Dear Waldo,

Am enclosing the Board member questionnaire and, as you can see, have not been very helpful. This is due to the fact for health reasons I had to move in 1994 and my new QTH does not permit me to erect antennas - quite a change from the 12 or 13 I had when living on Bodmin Moor. Have been off the air for the last eight years so am out of touch with most things in the radio world except the news received via the SOWP's newsletter. In fact, because of this I feel it is only correct I should resign as a board member.

But I wish to give you my reason for allowing Radio Amateurs to be admitted as full members of the Society. We are dedicated to keeping C.W. alive. As our professional membership is decreasing due to natural causes it is up to the rest of us to continue to ensure future generations will have this means of communication available. My main concern is that, God forbid, should the future hold a world-wide conventional war then the first act of the opposing forces will be to knock out their opponents Communication Satellites. End of communications!

In my opinion most Amateurs are dedicated to CW and - even though they possibly do a great deal of communication on the Internet as well - there are still the die-hards out there who think CW is THE means of operating, and are keen to keep it going. Many are very experienced in making their own equipment, inventing new antennas etc. Like old soldiers, they will never die. I know the Royal Navy is concerned and is keeping it as something to fall back on from what has happened over the years at our local relay station. Though have to admit the station has recently been closed due to the great advance of technology, but this is due to the expense of updating all relay stations so inevitably the lack of cash has closed several. The real cause of removing 'Sparks' from radio rooms and relying on satellite transmissions is entirely due to cutting costs and increasing profits. One day there will be a public outcry when a large cruise ship weathering a gale has its satellite mast crippled by the elements and then has a collision causing it to sink with great loss of life.

Three years ago I travelled to Ireland by ship. Although in my seventies I was giddy enough to ask for permission to visit the bridge - my reason being as an exWren and a radio operator, I was interested in present day means of communication. My step-son and step-grandchildren laughed, thinking I would never get permission. Outside the harbour there was a force nine gale blowing and my stepson insisted 'Grandma' stayed with the family. Not on your life - I had no wish to hold paper bags for sea sick travellers - I spent the trip on the bridge where there was one 'very young' officer working alone. While he explained the new technology the ship, on automatic pilot, was heading straight into the gale. The waves were so high it was impossible to see many yards in front of the bows and, more often than not the foredeck and bridge was overflowing with water. It was as though we were travelling through a liquid cave. After the young officer had explained how easy it was now to have voice communication via the satellite I asked what he would do if the antenna was snapped. He shrugged and said "Pray". I was already praying - hi.

4742-1

Being hard of hearing I could not understand the information being broadcast by voice - but had the messages been in morse I certainly would. There is no way I would take a long journey by sea until 'Sparks' are once again in charge of the radio room.

Why not Amateurs as members? I think of Amateurs as unpaid Professionals.

Thanks for reading this.

Best wishes for the continuation of SOWP. Am looking forward to being able to connect with www.sowp.org in the future.

Sincerely

Wicy

Alice Mitchell.
